

Cloverleaf AI

The product moved. The competitive story did not move with it.

THE STRONGER QUESTION

Cloverleaf now presents itself as full-funnel B2G intelligence. But six findings across five public surfaces point to a different buyer-facing reality: stale competitor cells, inconsistent self-proof, an older category frame persisting outside Cloverleaf, a funded challenger attacking the scope boundary, and crawlable proof metrics that can collapse to zero.

The funding announcement was delayed on purpose

The trigger is seven months of product/GTM movement around a May comparison snapshot - not the financing headline.

INDEPENDENT TRIGGER CONFIRMATION - GOVTECH, 28 AUG 2026

“The company delayed announcing the most recent funding until it had other news to report about growth.”

FACT

Cloverleaf and S3 say the \$8M round closed in January. GovTech independently reports that the announcement was held until growth news was ready.

GUARDRAIL

GovTech calls the round “seed”; Cloverleaf and S3 call it Series A. The naming inconsistency is unresolved and not material to the competitive findings.

One Starbridge availability claim is demonstrably stale

Precise correction. No parity claim.

CLOVERLEAF COMPARISON

Snapshot: May 2026

MCP Server Access

STARBRIDGE: NOT AVAILABLE

The same page presents Cloverleaf MCP access as available.

STARBRIDGE CURRENT PUBLIC SURFACE

Starbridge now publishes MCP access to buyer intelligence through ChatGPT, Claude, and other MCP-compatible tools.

CURRENT: MCP PUBLIC

FACT

The current Starbridge product contradicts one factual availability cell in Cloverleaf's May comparison.

INFERENCE

A buyer who catches Cloverleaf on one easy-to-check, outdated comparison claim may become more skeptical of claims that are harder to verify.

Pursuit now presents a broader signal-to-action surface

The current boundary is broader than the May frame, without establishing parity.

Evidence point	May Cloverleaf frame	Current Pursuit public evidence	EA read
Coverage	110,000+ SLED entities	170,000+ public-sector entities	Refresh figure
Workflow	Pre-RFP / document-led frame	Agentic workflows + Play Builder	Boundary widened
Actions	Intelligence emphasis	CRM upsert + Instantly sequences	Signal can move into action
Connectivity	Earlier frame misses current surface	API + MCP	Re-test integration story
Data depth	Budgets / meetings / documents	Automated FOIA + incumbent contract data	Re-test data boundary

GUARDRAIL

Do not state Pursuit 'grew by 60,000 entities.' The public figure changed from 110K+ on Cloverleaf's May page to 170K+ on Pursuit's current release; definitions may differ.

Cloverleaf’s own Pursuit comparison contradicts itself on its moat proof

The 70K+ speaker figure was inconsistent with Cloverleaf’s own 200K+ claim before the May snapshot.

200K+

CURRENT PAGE - ABOVE TABLE

The live Cloverleaf-vs-Pursuit page says 200,000+ identified speakers before the feature comparison.

70K+

SAME URL - COMPARISON

The comparison section later says 70,000+ government / verified speakers.

200K+

SEP 2025 + PRODUCT + GOVTECH

Cloverleaf stated 200K+ in Sep 2025, repeats it now, and GovTech independently reports 200K+.

FACT

The same live Cloverleaf-vs-Pursuit URL presents 200K+ speakers above the comparison and 70K+ inside the comparison. The 200K+ figure was already public in September 2025 - eight months before the page's stated May 2026 snapshot.

UNKNOWN

The public evidence does not establish why the counts differ or whether the definitions are identical. Do not call it a copy-paste error without internal confirmation.

Two competitors are actively defining Cloverleaf as the old product

Both pages were published in August. Both are live now. Both compress Cloverleaf back to meeting intelligence.

CIVIC IQ - UPDATED 12 AUG 2026

“Meeting intelligence”

- Uses 45K+ agencies and 70K+ speakers.
- Says MCP is “not described.”
- Frames Cloverleaf as the choice when monitoring is the whole job.

NATIONGRAPH - 24 AUG 2026

“Deep on one source”

- Calls Cloverleaf a public-meeting intelligence product.
- Says non-meeting sources are “not a focus.”
- Says AI access is product match-scoring, while NationGraph has MCP/API.

AI CRAWLER GUARDRAIL

NationGraph marks this comparison noindex for GPTBot, ClaudeBot, Google-Extended and other AI crawlers. It is live for humans; do not assume this page appears in AI-generated answers.

INDEPENDENT CHECK

Airframe, reviewed 29 Aug, still describes Cloverleaf's differentiation as meeting-first intelligence while Cloverleaf's current public positioning is full-funnel B2G. The narrower frame is therefore not confined to competitor-authored pages.

NationGraph is building the opposite category frame

A scan-derived competitor is trying to own “breadth around the signal” while conceding Cloverleaf’s meeting depth.

INDEPENDENT CONTEXT

\$18M

Series A

Axios reported the February 2026 round led by Menlo Ventures. Funding is context, not proof of product superiority.

NATIONGRAPH PUBLIC SURFACE

11 source types

Meeting video + minutes + budgets + grants + purchase orders + contracts + procurement rules + RFPs + press + records + contacts.

THE COMPETITIVE MOVE

NationGraph concedes Cloverleaf’s meeting depth, then reframes the buying decision around what happens after the meeting: contact, contract, and surrounding data.

DECISION

This is the competitor Cloverleaf should re-test next. If buyers accept NationGraph’s category frame, Vocal Fingerprinting can remain strong and still be recast as “depth on one source.” The response question is not feature parity; it is whether Cloverleaf can make its newer full-funnel scope legible before a rival defines the frame first.

Crawlable proof can collapse to zero

This is a discoverability / machine-readable proof issue, not a claim that every search engine sees the same thing.

PUBLIC PROOF	VISIBLE / STATIC VALUE	CURRENT CRAWL / SEARCH RETRIEVAL
Homepage sourced revenue	\$20M	\$0M sourced revenue
Demo / product coverage	70K+ agencies elsewhere on current site	0 K+ agencies in crawl text
Pursuit comparison email open rate	90%+ stated nearby	0% email open rate
Comparison-page proof blocks	Multi-million-dollar outcomes	Multiple \$0 M placeholders

OBSERVED

Two independent crawl/search retrieval paths returned zero-value placeholders from live Cloverleaf pages while the same pages also expose the intended non-zero proof elsewhere. The likely mechanism is not established here.

INFERENCE

If an index, AI assistant, or comparison crawler reads the placeholder layer instead of the rendered counter, Cloverleaf’s strongest proof can be weakened before a buyer reaches the page.

The issue is no longer “two stale competitor facts”

Five evidence paths now point to one operating problem: the competitive story is not synchronized across public surfaces.

1	COMPETITOR STATE DRIFT	Starbridge MCP and Pursuit’s current surface moved beyond the May frame.
2	SELF-PROOF DRIFT	The same live page can say 200K+ and 70K+ for Cloverleaf’s core speaker asset.
3	EXTERNAL FRAME DRIFT	Two rivals plus an independent Airframe page reviewed 29 Aug still frame Cloverleaf around meeting-first intelligence.
4	CHALLENGER PRESSURE	NationGraph is funded, current, and actively building a “breadth around the signal” wedge.
5	MACHINE-READABLE DRIFT	Crawl/search retrieval can expose \$0M / 0% placeholders instead of intended proof.

EA READ: Cloverleaf’s product may have moved faster than its comparison maintenance, proof maintenance, and external category narrative. That is fixable - but it is now visible from outside.

Fix the public layer in this order - then test whether the market frame moved

Public evidence can show what is out of sync. Internal data is needed to decide what should become the durable sales frame.

- 01 48 HOURS** Correct factual cells and reconcile 70K+ vs 200K+ definitions on every live comparison surface.
- 02 THIS WEEK** Re-test Starbridge, Pursuit, NationGraph and Civic IQ against current product. Separate fast-aging competitor-state claims from durable differentiation.
- 03 SEARCH / AI** Fix the machine-readable proof layer so crawlers do not ingest zero-value counters. Re-test search, AI answers and page source after deployment.
- 04 WIN/LOSS** Ask which frame buyers actually use: “meeting intelligence,” “full-funnel B2G,” or “signal-to-action.” Use real objections and lost-deal evidence to choose the durable narrative.

If useful, Evidence Axis can turn this public-evidence audit into a Competitive Decision Sprint using Cloverleaf’s pipeline, objections, battlecards and current positioning priorities - to decide which claims to defend, retire, or rebuild.
